

Coronavirus Covid19

A flu is a virus that makes people feel unwell.

Coronavirus is a type of flu.

People who have Coronavirus may have:

1. A dry cough

2. A high temperature

Most people who have Coronavirus will stay at home to get better.

They can rest and drink lots of water.

Some people who have Coronavirus will go to the hospital to get better.

We stop the virus spreading by washing our hands with soap and water.

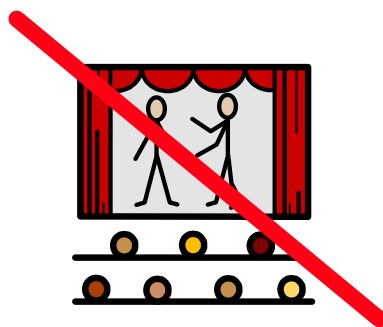

We wash for 20 seconds, making sure we wash between our fingers and all over our hands.

If we can't use soap, we can use hand sanitiser.

To help stop the virus from spreading, some places that people usually go to have closed.

I will not be able to go to my favourite places for now.

Once Coronavirus is gone I will be able to go to my favourite places again.

My school might need to close for a while. Everyone will be sent home. It will be closed to let everyone get better.

I will do my school work at home.

A grown up will let me know when I can go back to school.

Just like other types of flu,
Coronavirus will go away soon.

I don't need to feel worried, but if I
do I can talk to an adult.

I will keep safe. I will be ok.
